The online Patches system is absolutely rubbish!

Just now coming to fill out a form online to contact my GP doctor about two on going issues that isn't getting any better. I was explaining about the issues on my mobile phone. Trying to type it all out. It doesn't help that I'm neurodivergent and do struggle to fill information in. It had said you have been on here for 15 minutes and would you like to continue. I clicked on yes and was still explaining about my issues and filling it all out. Then it had said your request had been declined for being online for 30 minutes. Just when I was nearly done on filling it all out. An absolute joke! I have to fill the full thing out again. Then I had found out I have to wait for the next day to make a new request. Since it thinks I have already done one today. When I haven't! The new request option is blocked out. I will have to do it in notes now on. On my iPhone and copy and paste it. To keep it under the time limit. 😞 I really do hate using this online stressful patches system and the way the GP doctors are treating people now days. It's impossible to get proper help getting! 😞

I bought patched to help me loose...

I bought patched to help me loose weight as I have struggled for years. I thought all of these websites are rubbish but I thought why not give it ago, if it doesn't work I can have a full refund. So I bought the patches and went on a diet and exercised more. So a month on and wow I didn't loose an ounce. Instead I put weight on, how can this happen. So I thought no worries I will email them and just explain they are advertising a 100% money back no questions ask. Oh boy a month worth of fighting emails back and forth they DONT offer a 100% refund they lied its a con they where anything but helpful and kind they were rude and just kept repeating the same email we only offer 50% of the refund. Know explanation o forwarded the captures to them what they quote in there advertising, but know 50% or nothing. So please don't get conned like I did dont go anywhere near them they lie about there advertising they don't offer a 100% money back guarantee it's all big fat lie. They are nothing but a con please don't fall for it unless you are the lucky one and it works. Just remember the reviews that they have on, are they real people?

Stupid website very simple 1990 Style

GP staff able to complete a request without actually taking any action also was told that my medical records are accessible online I don't see anything anywhere what is the point of the system if you have to do the NHS as well when do you complete the request you have to put in a new request you cannot reply to the request it's one way communication that can dictatorship why are you not able to address them they did something wrong with speaking back on the plane or perhaps even correcting something because they do make mistakes I know that for a fact

★★★★★ GB • 7 reviews • 26 Sept 2025

Absolutely useless

Absolutely useless, the ability to lodge an issue is functional for about 1min at the very start of the day. Also the app is no longer available and the webpage functions differently depending on whether you access via the GP (works) or Patches hub (doesn't work). Patches only extends the time spent suffering in ill health. This is absolutely awful digital design and service.

Garth TRUSTPILOT (1★)

★★★★★ GB • 2 reviews • 20 Sept 2025

Complicated convoluted

Christ on a bike I'm 66 and have used IT and apps etc since the mid 90s and believe I'm a pretty good judge on the usability of this system. Absolutely awful and I pity anyone over 75 who have no experience of IT and don't have smart phones. It's so complicated when you want to make a simple enquiry which you could make by telephone but the GP will now only take emergency calls I only ever use it for repeat prescriptions and each time I go through the process of ordering it asks me for a complete breakdown of the last few months symptoms which in my view is not needed as the Doctor has prescribed it. The first time I used it I just wanted to check out how it worked. And it ordered a repeat even though I hadn't submitted it and wasn't going to. The repeat was subsequently rejected as it was too early and then when I went to actually order a script it refused again as it said I had previously been rejected. The old system MYGP was so simple and quick and we now seem to be losing the old bedside manner that Doctors used to have as I've not seen my GP in 15 years as the odd occasion I've been to the surgery it's a nurse practitioner. Pile of #####

It is like a virus.

I don't have an iphone but I keep getting multiple messages about the same appointments on a small mobile. I have told my GP surgery several times that I don't want it as I find all the messages annoying, confusing and don't have enough memory space on my mobile for them. I have even unsubscribed after following an address they sent me but I still keep get pinged. It is like a virus. Once they have you they don't let go. I am able to write my appointments down in my diary thank you. The pings are just making me angry as well as confused and I am more likely to miss an appointment. Please respect my wishes, not yours. You are supposed to serve and help. I feel like throwing my phone away.

This technology was introduced for...

This technology was introduced for already overpaid lazy receptionist that think they know everything in the medical world to look at what's suppose to confidential information and judge weather the doctors have time to deal with the problem there is no time scheduled for a call they just ring whenever they want and only once so if you are to miss the call your unable to ring back and have to file another thing on this rubbish system for me to miss the call and the circle continues all in all what a waste of everyone's time and effort if your older then 40 good luck with this terrible terrible idea whoever sanctioned this to be used needs to be sacked

Mashup TRUSTPILOT (1★)

★★★★★ GB • 61 reviews • 28 Aug 2025

An absolute crap system

An absolute crap system. Takes me round and round, in circles...verify you're not a bot..successful...verify again and then again! Also, mostly 'the system is not functioning, please try again later'. Used to be easy enough, just to order repeat medication, on the nhs app. But, no, let's put in a few harder steps for anyone to do anything. Morons.

Kathleen Nicholson TRUSTPILOT (1★)

★★★★★ GB • 44 reviews • 27 Aug 2025

Patchs - I don't want to hear any more about it!

We have recently moved to a new area so got introduced to Patchs. What a nightmare! At a time when you a medical problem, this is the last thing you need. We are in our 70's and computer literate, but believe me, if you didn't have high blood pressure before you use Paths you certainly will after trying to negotiate it. Is this the governments idea of cutting down on staff and so making a cheaper nhs? Has this been thought up by students who have been using technology since they were two years old. How lovely it used to be to ring your gp, speak to a receptionist and get an appointment. I do realise that those days have gone, but really, Patchs adds such a lot of stress which we could well do without.

This software is ridiculously complex and doesn't WORK. Whoever thought this up must be devoid of all common sense, it is NOT at all intuitive and a nightmare to the elderly to use !!!! SCRAP IT NOW !!!!

IR TRUSTPILOT (1★)

★★★★★ GB • 3 reviews • 15 Aug 2025

Horrid app

Horrid app. I consistently told I had swollen glands on body, yet the app kept asserting that I had a 'sore throat' and then a 'skin condition.' I had to answer about 25 questions to get to that point, where it was telling me to go to a pharmacy. Also, very few people in the surgery can use it as many people are without a smartphone or email address or confident with that much reading and typing. We're not in Silicon Valley, we're in Tottenham. Fund NHS not GP apps.

Mark Elliott TRUSTPILOT (1★)

★★★★★ GB • 17 reviews • 15 Aug 2025

Harder than needed to make a very simple request

Had a very simple request with regard to a pre existing condition. Had to go through several steps asking questions which I have answered many times before. Strange to have fields which are designated as "optional" then requiring a response before can proceed. Annoying when a presumably common response is "no" to have it rejected because field requires minimum of 5 characters.

PATCHS is rubbish on a mobile phone

PATCHS is possibly the worst bit of software designed for the NHS. It's almost impossible to use on a mobile phone and staff have many problems according to my doctor. Its layout is almost impossible to navigate so I refuse to use it.

Mr Edmunds TRUSTPILOT (1★)

★★★★★ GB • 12 reviews • 12 Aug 2025

A nightmare of an app that cannot be escaped from.

A nightmare of an app, badly designed, circular in places, and exhausting for an ill person to have to go through just to get an appointment. Patients want to talk to people, not machine learning. What is even worse, is even though I never opted into PATCHS, but it is impossible to opt out. I have tried every possible way to do so with my local surgery, Lancaster Medical Practice. Numerous phonecalls, letters, visits in person, emails with the Practice Manager. Each time I'm assured that I will not be contacted by PATCHS again, and each time I am. A total farce. It is suppose to be AI, but it is as dumb as a rock. Also, last year its reviews on here were 1.5 star, now it is 4.5. It seems one thing it can do is remove negative reviews, even if it can't remove me from its system. Some practices have done away with it, I wish mine would.

James TRUSTPILOT (1★)

★★★★★ GB • 11 reviews • 12 Aug 2025

Poorly designed User Interface

Very poorly designed user interface that is very long winded. It would be considerably easier to just email the surgery with a request for a sick note that goes through the rigmarole of using the Patch Healthcare system. That does also make me a little suspicious of all the positive reviews!!

One of the worse experiences I've ever...

One of the worse experiences I've ever had with the NHS. Needed to book an in person appointment with GP. Surgery wouldn't and said I had to use patches app. Ended up in an awful circular ridiculous bot chat that a) didn't address or even identify my issue correctly and b) didn't allow me to book an appointment. Subsequently the GP practice had to call the next day. So it was a total waste of mine and their time. Really don't understand how Patches has such high ratings. I really worry for non-app literate patients and am confident it's limiting access to services for people who give up rather than deal with the unhelpful and incorrect questions.

I am a 76 year old with Parkinson's

I am a 76 year old with Parkinson's. I have been on medication for some years now but felt the problem was getting worse so I wanted to see the doctor about increasing my medication. Tried to make an appointment on the phone and got a recorded message to use Patches on the internet. I spent 2 hours reading the instructions on how to do it, at my age the internet is not something I understand although I do have a computer. In frustration I went to my surgery and spoke with the receptionist who was very dismissive and just told me to use the internet. I kept making phone calls and eventually got to speak to a human. She asked for my details and said the doctor would call me back, this never happened. Next day I called again and was told a doctor would call back before 6.30 pm again nothing next day the phone was answered by a human who made me an appointment for the next day, its tomorrow so lets see what happens. This is a ridiculous system totally unusable and not fit for purpose. This was at Poplar House Surgery, Durham Avenue, St. Annes St Annes. Lancashire

Steve TRUSTPILOT (1★)

★★★★★ GB • 14 reviews • 26 Jun 2025

abysmal

I'm not sure how anyone else in their right mind has given this good reviews. if you have a simple query, you have to wade through a dozen irrelevant questions. it would not accept my attachements. tried a jpg => "undefined files are not supported, please try another format" so converted to pdf => "There was a problem uploading the following attachment: driving license.pdf" UI is horrible, clunky and buggy. to book an appointment, apparently I need a key. for which they want me to bring various ID to the surgery. very much defeating the purpose of online booking. so that fact that I'm already logged in with my NHS id is not enough?? simple email would be 100x better.

Angelica Ashbrook TRUSTPILOT (1★)

★★★★★ GB • 1 review • 16 Jun 2025

The worst invention ever!

How many old, vulnerable, and uneducated people are going to die because they do not have access to use patches or if they do, use it? Most of these good reviews must be lying or just thinking of themselves. You can't even send a message out of hours. We cannot make an appointment via the phone, so to the people stating you can, that is not true. It asks for far too many questions that are not necessitated. How many human energy hours are going to be spent on this? Millions and billions. I don't always have 30 minutes to play around with a laptop just to get a prescription, or urgent meds. The ai doesn't even understand everything you write.

Too many questions, to get an appointment

I have chronic conditions, need regular prescriptions. The details are all in my medical records. Patchs asks questions and knows nothing. Trying to get an appointment took me 30 mins to answer the questions and take photos. Photos wouldn't load into Patchs. Then I had to say I wanted an appointment. I tell Patchs I can't be contacted by mobile phone at work, and guess what, the surgery staff try to contact me by mobile phone. How is this a better service for the end user patient.

customer TRUSTPILOT (1★)

★★★★★ GB • 3 reviews • 4 Jun 2025

Patchs has made it harder to access a GP, not easier.

This was just abysmal. At 8am I phoned up my GP surgery to try to arrange an appointment for my ill daughter and was shunted onto the Patchs automatic service. I gave the details and two hours later my wife was contacted by text message saying they needed more info (I had asked they contacted me as fortunately I had the time to do this today). My wife jumped out of a meeting to respond immediately. It's now 9pm and we've had no contact. Patchs has made it harder to access a GP, not easier.

Michael TRUSTPILOT (1★)

Confusing system and not straight forward, i am not confident with the internet so today i got help to set up patches account to give it a try and it was far to confusing. Not helpful to me at all.

Mr Graham Dennahy TRUSTPILOT (1★)

★★★★★ GB • 38 reviews • 7 Apr 2025

Not fit for purpose

Not fit for purpose - continually going offline or not working at our surgery. Admin don't triage your request properly. It's no substitute for the old fashioned receptionists from 20-30 years ago where you could walk into a surgery and make an appointment to see a doctor. Probably ok for GP's that aren't patients so don't have to use it. It just a barrier between patients and proper healthcare. Where is The Duty of Care - not with the Patchs system

It is completely rubbish

It is completely rubbish. Logged on as soon as the system was opened, less than a minute later, no appointments left. Actually impossible unless people are gaming the system. You cannot fill the various data boxes out that quickly. This - like everything in the NHS - is half-baked and not fit for purpose.

Caroline Northern Bitch TRUSTPILOT (1★)

★★★★★ GB • 1 review • 1 Apr 2025

Impossible to use , you just go round in circles

Today is an appropriate date for this review because PATCHS IS A JOKE! Absolutely useless. I just want to book an appointment and my surgery demands we must use this patchs for it because they no longer book by phone. IT MAKES NO SENSE AT ALL. There is no actual option to book an appointment , asking for help with a problem is impossible (nobody replies) and if you are unwell you don't want to be faffing about messaging someone who doesn't even respond. It's very inconvenient . I'm going to have to change surgery to one who doesn't force this rubbish on people, no regard for people who don't have internet access or can't use it , everyone doesn't have someone to help them and frankly, even a technology expert would struggle with it. . God help people who have learning difficulties and old people trying to use this rubbish, it seems as though they're deliberately making it difficult so they can ' push people off'.

Grateful but frustrated and disappointed

I'm grateful to be able to contact my GP online at all, but the PATCHs system is extremely poorly designed. Standard design practices are either absent or implemented very badly. For example, after every message I submit, the page reloads and view moves to the top. I have to scroll down to find my place. Then, 1 second later PATCHs sends a reply, which makes the page move again. Probably the 1 second delay is simulated to make it seem like a human interaction. This is a poor joke, as nothing about the frontend implementation is anything like existing chat software. Overall it feels unprofessional, like a student project made by people who lack experience in real world software applications. Why this experiment would be forced on vulnerable users I have no idea.

My experiences of contacting my surgery in times of real need

Can't recall dates. Since first using patches for this episode, subsequent request via patcheschaf been largely ineffective. A vulnerable patientv in need of essential meds had to ring surgery,(issues with long virtual queue) and dispensing tesco pharmacy who was extremely helpful. Reception staff need more customer training, tick box responses stresses me more. Got to listen to patient! Needless to say I have been patient and professional in my interaction even when one responderrefused to identify herself On a positive not the first GP intervention was helpful but he failed to review as expresses. 2nd and 3rd Gp intervention excellent listen to my symptoms and offered save help albeit symptoms persist but they tried their best. This is the the first time I have done to show professionals my journey and experiences to my recovery. I appreciate nhs is stretched however a little care and compassion is not costly but employ people whose work ethics are humane and train them to listen, speak clearly(I'm a 73 doddery but intelligent individual) and treat a potential with respect and dignity. I hopeci won't be subjected to discrimination or penalised for raising these honest experiences. I am happy to be interviewed. I hope the telephone interactions are recorded for training and safety.

Patch's itself is really good, shame about the GP surgery staff

Patch's itself is really good but the people reading the messages unfortunately do not read them correctly and like to close off requests before anything has been actioned. This has happened every time and because the request is closed there's no option to respond, meaning a second request has to be made. That is more about the staff at the GP surgery than the systems however, and if they took proper notice of the request then the system would be ideal

Confidence Lost in Patches due to Unanswered Messages That Have Disappeared

On 21 Oct 24, I hastened my GP for test results. That message has not been answered. It has disappeared from my messages box. On 9 Oct 24, I agreed to go on a 2 hours' course at my nearest hospital about my newly diagnosed condition. I was required to have an appointment at that hospital for a test related to that condition. I expected my GP Surgery to ring me to agree dates and times. My hastener, on 25 Oct 24, is also unanswered and has also disappeared. Today, 7 Nov 24, I have hastened the 25 Oct 24 message and I am about to hasten the 21 Oct 24 one. I am not confident that today's 2 hasteners will fare any better.

★★★★★ GB • 13 reviews • 5 Oct 2024

Ridiculous and not fit for purpose

This is such a poor way to make appointments. It is not convenient at all as you can't use it out of working hours. I understand if you are trying to get an emergency appointment but if you need an appointment that is not an emergency you should be able to use the site to book out of surgery hours. Not everyone has a job where they can have their phone on during the day to fill out an endless form which is pointless. I work in a school and can't just do what I like when I like. The site also closes at lunch time! It also does not give you the option of appointment times instead you have to wait for that text telling you to come in at a certain date/time and then you have to call anyway to try to change the time to fit around your work or as close to. GP direct had a much better system before with patient access, I don't know why they changed it.

★★★★★ GB • 7 reviews • 16 Sept 2024

Patchs is not a patch on making a telephone call.

If you do not get onto the system at 8:00 a.m. you are likely to be told it is full for the day and to come back tomorrow! If a Friday then call back on Monday! You cannot even leave a message! Not everyone is up and able to go online at 8:00 a.m. precisely. Insomniacs might finally be asleep, some people will be on their way to work possibly driving, others will be at work and others sleeping or returning from a night shift. Is the assumption that if you need to see a doctor you are not going to work?! Parents might be taking children to school or at least preparing them for the day. Not everyone can use a computer. There appears to be no flexibility. On one occasion I rang 111 after not getting through on Patchs and they made me an appointment with the doctor for about 9:30a.m. the same day! So the appointments exist but access to them is made very difficult. If ill you neither want to nor are able to jump through hoops to see a doctor. The system might suit the doctors but it does not work for a number of their patients.

Disgraceful experience

Absolutely appalling ! You get 2 minutes at the start of the day to log a request or appointment, after that a message comes up saying " it is unavailable due to reaching their safe capacity limit" . What does that even mean ? If its an online system why do they have to have a limit ? You should just be able to go in and leave a message or book an appointment like any normal efficient system . This is simply not fit for purpose. I was then waiting to get through on the phone for over 3 hours then gave up !! I am afraid doctors' surgeries do not exist anymore, there is no point in registering with them.

District Nurse response and attitude

Glenroyd Medical Centre reception staff and Dr Khalid's performances, courtesy, attitude, advice, fast response time and overall service was simply outstanding. I was under the impression that a nurse would see me within a couple of days, regarding an assessment and issuing of medical creams and dressings. After 5 days I heard nothing from any nurses, so I went into patches and also found no referral had been made. I then made a separate referral and told the practice I would be visiting in about an hour to check if any dressings or creams had been put to one side to pick up. There was nothing and whilst at the reception a female District Nurse (DN) rang. Overall, I found her attitude, manners, overbearing interruptions and seemingly "couldn't care less attitude" very disconsoling, which left me astonished, especially compared to the extremely helpful reception staff and Dr Khalid. My basic options were to agree to an appointment (home visit) in 3 weeks, go to a "Walk-In Centre", or cancel. I booked the appointment I also highly extoll the virtues and amazing helpfulness from the Duty Pharmacist, Mona, at Cohen's Pharmacy, where I bought dressings and creams. I sincerely hope that the rest of the DNs in the practice are better. The DSs in my previous practice (Over Wyre) were superb. Maybe I caught this one on a bad day.

Patches does not allow you to enter a preferred number to be called on

GP practices will only call one number. Unfortunately the preferred contact number on patches is defaulted to the mobile number. My practice try and call me on my mobile but I live in an area of poor mobile reception and calls don't get through and my call is closed. It is mandatory to enter a mobile number on Patches, so you won't get healthcare if you don't own a mobile - discriminatory. I am being deprived care because of this useless system - should be withdrawn from the market until this is sorted out as you shouldn't be deprived healthcare because you live in an area of poor mobile reception or don't own a mobile. Healthcare should be easily accessible by all.

Very poor software

This software is very poor, either as written or as configured for my GP practice. In this day and age not providing 24 x 7 access to this software is frustrating - people need access day and night. As other reviewers have mentioned, having to connect to the software at 08:00 and, if later in the morning often being told that all the 'slots' have been taken and to try again at 14:00 or tomorrow is infuriating. My GP resists being contacted by phone or email and attempts to drive patients to Patchs. The software design appears to assume that all requests are of similar 'weight'. Today I wanted to book a low priority telephone appointment in, say, two weeks time. Patchs, or the configuration doesn't allow that. In addition, presumably to support the AI approach, there are only tick boxes and no fields where the patient can type in important info about what is wrong. As an ex Management Consultant and Software QA Engineer I cannot believe that this program is the best we can do. My advice to my GP practice is to find a competitor which offers more functionality.

Are we deliberately making healthcare inaccessible? / GDPR issues

User Experience is my day job and I have to say we're severely missing the mark on providing accessible healthcare if we are limited to the options like PATCHS to simply book an appointment. When I called the surgery I could only get an appointment in 2.5 weeks time. By this time my health may have deteriorated or complicated further or I might be wasting everyone's time if I've recovered. My second option, I'm advised, is to use is the online PATCHS system to be 'seen quicker'. Clearly a negative motivator, given the alternative timelines, to use PATCHS. Using PATCHS I counted 16 steps and 10 minutes before I could submit a 'request'. It was unclear to me if, as I was advised, this was how to book an appointment or if a 'request' was part of the process of booking an appointment. After calling the surgery again, I was told I needed to wait after submitting a request for someone to call me at some point within the next 48 hours. I received contact from someone on the PATCHS chat later requesting verification of my address which, if I provided this, PATCHS told me it would be uploaded to my medical record(!?)... Why would my GP need to see my council tax bill on my medical record 😢. This is not only a privacy issue but a breach of GDPR regulation. Naturally, I asked so submit this another way, but looks like for now we're constrained by a system that can't intelligently predict every conversation a Medical Centre might have. Irony! Update: PATCHS, despite being an online service provider, closes shop at the weekend and prevents any requests from being sent. I understand staffing operating hours but that shouldn't stop me submitted a request like other help desk services. Bottom line: As an end-user, the whole system feels like it has been designed to reduce contact with the GP which defeats the principle of accessible healthcare. I may be wrong, but there is so much scope for improvement here, but as far as I can see, there's no

change since I had to start using it and likely no motivation to change as they probably have a comfortable monopoly with the NHS. And to be fair, the GPs working in my healthcare centre are brilliant, and I've always received great care, support, and advice. I just wanted to share my patient journey here as I can't believe the digital barriers I'm witnessing to be seen, heard, and cared for. I hope someone can address these issues or propose a better service provider in the near future.

Out of the blue

Out of the blue, received a 'no-reply' email from 'Patchs' purporting to be conveying a message from my GP surgery, suspicious, so did a little digging, strong smell of 'big data farming' here. GP surgery had no right to pass my contact details to this company, without my consent. The email wanted me to click on a link in order to read the message, but seems that if I did so I would automatically be opted in to their system, and be giving on-going access to my confidential medical records. I ignored it, but then they pestered with a reminder, so I blocked the sender, any future messages will be treated as spam. Another NHS waste of OUR money. Why can't GPs just get off their backsides and do the job they are being (handsomely) paid to do, without all these silly barriers and diversions?

David TRUSTPILOT (1★)

Data farmers.

Another layer of bureaucratic red tape between the Dr and the patient. IMO this company is just another useless NHS "provider" who are in the business of data farming to sell on to "carefully selected third parties"; in other words, anybody who will pay for it. Why are the Dr's using this company ?; are they getting a cut ?.

Hopeless where I live

I'm not sure it is PATCHS that's at fault as when I can get to fill a form in it works OK but my surgery keep closing it off telling you to try at a specified time but when you do you get the same thing and can never get anywhere. I tried on a Friday mid morning as was quite unwell and had been for a while. It told me to try at 13.00. I did that and was told they weren't taking any more requests and to try 7.00 on Monday. I did that. Logged in and started filling in the form but got cut off and message came up saying they weren't taking any more and to try 9.00.

One can only submit requests during GP...

One can only submit requests during GP opening hours which is impractical for non urgent requests. Requests get triaged by an external team that does not know the patient history. What they deem non urgent and standard results in an average 3 week waiting time for an appointment with no context of patient history. Surgery reception seems unable to do anything about it if one is unhappy with the triage result. Frustratingly robotic questions. I have no idea who is reading anything I am typing, whether they are working from home and how my data is being handled, especially when photos attached. What happened to just calling your GP for an appointment and seeing a doctor. An unnecessary additional step one is forced to take which only benefits the GP's who think they are triaging their patients better and employing less receptionists. Also concerned that the resulting number of phone consultations resulting from Patchs will miss off other unrelated medical issues which would be picked up in person. I have no idea who has written the 5 star reviews as all I can see is one one-star review after another.

Waste of time and NHS money

I still cant see a user menu, all I get is the appointments page. I used to be able to see my test results for two years now I can't see any.. The help button just tells you how great they are. Finally found an email address to report the problem. The terse response, 'tell your GP practice., in spite of the very many messages on Patchs website sayoing'dont contact your practice for Patchs issues'. Their triaging is also complete nonsense viz, 'what are you doing about it ?' 'what caused this ?' Very amateur interface. Let me suggest a better one.

Another process wasting NHS money

Another process and additional waste of money to the NHS. What is the point in having this if a person then has to review it, it is not cutting out time its taking up more time adding this extra process in. And by providing a service that can only be accessed on a device is alienating the elderly. My GP surgery has started to use this process so even if you get through on the phone they fill a patches out which is adding another process by it then sitting in the balance of the decision for a gp whom is going off of a few select words that the call handler has chosen to write down. When I have filled the patches form in myself and i am notified a response would be made within 48hours. I call after this time and noone can see my request and apparently patches had "gone down" that day. What an absolute waste of money....!!! There is also no way of replying to a response. So if a response is made to your patches request the request is closed without even asking if that resolved the request or allowing the person to send a response. Not user friendly at all....!!

Not fit for purpose

Not fit for purpose. I tried calling my GP multiple times, but kept being told the phone queue was full. So I decided to register with Patchs because I was told I could contact my GP through them. This turned out to not be true. I can't contact my GP through patchs. I have tried repeatedly to log into Patchs, but they say my password was wrong. I have only just set up my account and I know exactly what password I used. The email I received telling me I now had an account with them asked me to leave feedback, but I couldn't log in, so I couldn't tell them how useless their service is.

Not suitable for humans

This Patches system is inadequate. The 8 o'clock telephone rush, has now been replaced by the 8am and 2pm Patches rush. Since the system 'reaches capacity' very quickly you are in exactly the same boat as when you rang up for an appointment! Not only has this system eliminated older people who have not kept up with technology, but it has made it just as difficult to get an appointment. The software seems to work pretty well but that is just not the point. One deficient system has been replaced by a more irritating deficient system, which further disadvantages the people most likely to become unwell. It would almost be a funny Orwellian joke if it wasn't so tragic. These systems are not just things that are 'happening'. They are the result of a deliberate decision by somebody. It's rather like Horizon and look how well that turned out.

Awful

Awful. When I finally worked out the relationship between my NHS login, Patchs and my GP surgery I managed to get in. Only to find Patchs unavailable, in other words turned off. Waited 25 mins on the phone to the surgery, a line that was so bad she had to call me back. Patchs "turned off" because of high demand! What on earth is the point of having the system if you're going to turn it off? Call back tomorrow at 8am with the rest of the population and get one of the very few appointments available in 2 weeks' time. This government has destroyed our NHS.

Unfortunately used by my GP practice...

Unfortunately used by my GP practice and has been nothing but trouble. Using it through the NHS app is a nightmare, you have 2 option to login everytime either "continue with patchs" or "continue to NHS login". It doesn't tell you which to use or the difference either. Both often lead you to a login prompt which either rejects known good passwords, says no such account or flatly just shows a blank screen. Sometimes (ie VERY occasionally) it allows you through without login prompt at all and sometimes it looks like it going to work only to fail. This 3rd party system has no doubt cost GPs and the NHS at large a lot of money by promising the world, only to prove itself a waste of time not fit for purpose.

Concept = great.... reality = shambolic

Patchs as a concept is a great system, it is a secure platform where patients can see their ongoing (or resolved) health issues, fill in mental health or other health questionnaires, ask questions to the GP and communicate in writing, allowing time for both parties to respond in their own time... However, my GP practice has elected to "use it differently to other practices" their words not mine... they immediately close all requests without posting a message or any information on what will happen next, i'm constantly finding myself raising the same health problem over and over and over again, the GP seem unaware of my health issues because the reception staff have total control over the patchs system, it is unfortunately open to abuse for negligent NHS staff and is not being used properly by some GP practices

Steve How TRUSTPILOT (2-3★)

★★★☆☆ GB • 1 review • 30 Jan 2025

Patch only available during the day

The patch system is not dependent on human interaction. A set of predefined questions are asked for you to respond to ending with the message that you will be contacted. It is therefore unnecessary for the patch system to only operate during daytime working hours. The system could operate 24 seven and if it did, it would be far far better. The fact that it doesn't means that it is almost inaccessible for those that work and do not have access to the system during working hours. I am such a person and I found myself in the unenviable position of ringing my GP practice who were incapable of making an appointment for me and instead sent me a linked to the patch system overriding the fact that it was closed. What a ridiculous set of circumstances that clearly my GP practice have found necessary all because the patch system is not available 24 seven.

I believe Patchs to be a deliberate barrier to accessing primary healthcare

Writing this review on behalf of a family member... Making a new appt for a new problem was reasonably straightforward and the MANY triaging questions made a certain amount of sense and we did get an appointment out of it. But we needed to get in quick at the start of business at 8.00am to catch the service while it was briefly open (before it closes down about 20 minutes after opening) - it took a few attempts over a number of days to get access - it opens at 8.00am and by 8.20am it is closed! Simply checking in a few weeks later to make a follow-up on the same problem (as suggested by the GP) similarly took a number of attempts over a number of days as it was only open for business very briefly in the morning on weekdays only. It was also extremely annoying and time consuming having to trawl through all the same questions as if starting from scratch even though I simply wanted to arrange a follow-up as advised by the GP. Patchs describes its mission as being "...to unite and simplify healthcare, making it more accessible to everyone – so that you can get the help you need, when you need it". In reality it seems to be set up primarily to make it as difficult as possible for patients to communicate with their GPs. I do not believe this is the result of incompetence or chance factors. I believe the deliberate and designed purpose of Patchs is to make it difficult for patients to contact health services. Because those services are underfunded and understaffed, Patchs successfully puts up barriers to patients which takes short-term pressure off those services while patients give up in despair and either don't bother (while their health conditions continue and worsen, causing more pain and suffering and more cost to the service in the long term) or they go elsewhere (private healthcare, walk-in centres or A&E).

Patches is a small patch mainly for...

Patches is a small patch mainly for inbound messaging nothing else. It does not tell you your test results, ongoing test trends which are diagnostic for both patient & doctor, it does not tell you what appointments you have coming, there is no visible interactive messaging, there is no prescriptions list and there's no way to send your med history to another doc for a second opinion. Yes there are roundabout ways of doing all this, a clunky patchwork of services in separate silos run by NHS, the surgery appointments book, and patches. It is not a one stop integrated service like MyCharts by EPIC which does everything and proven by doctors and hospitals globally. The comparison is more like a pocket calculator vs Microsoft Excel. If you are a surgery faced with a choice, go with MyCharts, the time and effort saved will pay off.

Worst thing to happen to the NHS, get rid of this nonsense. Poorly developed, crashes often, and unfair on the older generation to make them use such a technically confusing site! Burning Sulphur 1 review a month ago Their front end appears to be developed by back end devs. I have a degree in design and can confidently say that the service could be used as a case study for bad design. They are an AI company historically, so they seem overly fond of the chat box layout. When requesting a repeat prescription the AI would want to direct me to other sites for support instead of contacting the GP. It's a repeat prescription. Just pass it on to the doctor. The fact that on numerous occasions I have been directed by staff to ignore the questions and put all my information in the first box for the GP to read highlights that the issue is known. The UI/UX is so poor that to list all the mistakes and provide corrections would qualify as a week of work. I hope that they hire a design consultancy to rework the system with a focus on the user journey map. 1

If I could give it minus 10 I would; a 10-year-old high school student could do better than this; usability 0, feedback 0, interface 0. Can't find anything positive to say about it Absolute rubbish

This is an awful system to keep patients from their GPs. Practices who use it should stop wasting their (our) money.

Does not work and I am being denied access to my GP as Glenroyd Medical in Blackpool insists Patchs is used by even if patient cannot access the app.

User interface is terrible, still not sure whether the request has actually been submitted as a result and the timer for something that asks near un-ending and often irrelevant questions is pointless. I've worked with computers my whole ... More

The use of AI or bots in health services, is just going to deny people access to services at the point of their greatest need. If the NHS thinks this is a way of repairing the service they are gravely mistaken, its just going to grow the ... More

Patches is ill. It regularly crashes while I'm using it, and sometimes once I've completed a request it simply disappears and never creates a message. This usually means if I try again it won't work, so I will have to wait until the next day. Some days I'm lucky. Needs further work to make it more reliable as it's wasting everyone's time, having to do everything a number of times. It needs diagnosing and mending 2

Irresponsive, inaccurate, disconnected. 1 jo wilson 1 review 7 months ago Appalling system. So long winded while they ask stupid irrelevant questions that more often than not you are timed out. Even though you put info in I don't think anyone actually reads it eg photographs - explained why I could not take a photo & was then asked to submit one. Wanted to change my appt - couldn't find anywhere to do it - just kept being told I had an appt. Multiple messages the exact same. Did the people who invented this system know anything about writing programmes? 1

My GP shared my personal/medical details with this company (Advanced Health & Care) without my consent. They refused to respond to a SAR. 1

Received exact same text message from Patchs 6 times. Surely this system can't be trusted. 1
